

Byzantium in the 16th Century

The fact that elements of the tangible and intangible heritage of Byzantine Constantinople were preserved as the city's urban layout was gradually transformed during the decades after the Ottoman conquest of 1453 is well known to international scholarship. Yet, the nature of this transformation and the degree to which the Byzantine background affected 16th-century realities is possible through the thorough study of an array of texts, careful examination of the material remains still visible in modern Istanbul, and a close focus on the diverse institutions active in Ottoman Istanbul.

In the workshop the participants will investigate diverse aspects of the urban physiognomy and cultural activity of Constantinople/Istanbul during its early Ottoman phase. By combining an array of methodological approaches, they will address more complex issues, such as the familiarization of western humanism and renaissance audiences with the physical space of the Ottoman capital and its Byzantine background and the role of the Patriarchate in the organization of Christians in the Ottoman Empire and Eastern Europe.
